Dear Sir,

The following is the report of Meeting held with Shri Suresh, CEO, Co-create Venture held on 28<sup>th</sup> July 2022 for your kind information.

### Report of Meeting with Venture Capitalist- Shri Suresh:

The Department of Oral Medicine along with Student's Support Committee D A Pandu Memorial RV Dental College organized an event "**Meet a Venture Capitalist**" on Thursday the 28<sup>th</sup> July 2022.

The Program started with a welcome note by the Principal Dr Asha R Iyengar. The Guest Speaker Shri.Suresh, CEO of CoCreate Ventures addressed the gathering by giving them a birds Eye View perspective of how to ideate, convert the ideas to workable thoughts and then transform them into actions yielding desirable results. He elaborated the process by giving anecdotal experiential examples making the audience imbibe the process of how Start Up Companies originate and function. He then explained various ways of seeking financial assistance. An interactive discussion ensued subsequently ending with a promise to collaborate in future. The Principal then thanked the speaker and handed over a token of appreciation.

## Salivary gland disorders puzzle

### History

#### Case 1

- Mother of a 3.5 year old male patient comes with a complaint of black discoloration of multiple teeth since 4 months and also of missing teeth.
- She says that the blackish discolorations were small to begin with and they have reached the present state in the past 4 months. However there is no pain associated with the discolorations. The patient doesn't consume much of sweets or sticky foods and brushes his teeth once a day. The mother has observed that the patient drinks water frequently.
- The mother says that the upper front teeth has not erupted and she is worried about the unsightly appearance.
- The mother says that the child has a older brother who is 5.5 years old and he also has similar black teeth and missing teeth.

#### Case 2

- 50 year old male patient presents with a complaint of swelling inside the lower portion of the right side of the mouth since 2 week which is associated with pain.
- The swelling is of sudden onset, increases in size, stays for few hours and then reduces on its own. The patient has noticed the swelling around the meal time.
- The swelling is associated with a sudden onset, severe intensity pain which is initiated on its own and during the meal time. The pain stays for a few minutes and it gradually subsides on its own to reappear along with the swelling again during the next meal time.
- The patient is diabetic since 10 years and is on 20 units insulin twice daily and hypertensive since 8 years and is on diuretic. Patient underwent a surgery for kidney stone removal 2 years back which was uneventful
- Patient is a smoker since 25 years and smokes 8-9 cigerrates per day.

### Case 3

- A 16 year old male patient complains of swelling on the gums behind the right back tooth region since 15 days. The swelling has slowly increased to the present size. Patient gives a history of tooth brush trauma around 15 days in the same area and then he started noticing the swelling behind his lower right back tooth.

### Case 4

- A 35 year old male patient complains of swelling in the right side of the palate since 15 days. The swelling was initially small and over the last two weeks has grown to the present state. No pain associated with the swelling. Patient does not give any other significant history (like trauma, dental treatment etc).

### Case 5

- 35 year old female patient comes with a complaint of swelling in the left floor of the mouth area since 15 days. The swelling is slow growing, painless and increases during meal times
- Patient gives a history of traumatic extraction of her lower left back tooth around 1 month back.

### Case 6

- A 35 year old male patient who is a Chinese national and working in an IT company comes with a complaint of swelling on the right side of the floor of the mouth since 3 months.
- Patient has also noticed a swelling on the chin area since 3 months. The swelling is slow growing and is not painful. Patient doesn't give any history of fever, or flu like symptoms.

### Case 7

- Patient is a 40 year old male and complains of an ulcer in the inside part of the upper jaw region in the mouth. He has noticed this since 1 week. Initially he felt pain in the same area about 2 weeks back and a small bump was noticed when he passed his tongue over the area. After a week the pain suddenly disappeared, however he felt a

ulcer developing in the same region. He is worried about the cancer and he has come for consultation. There is no associated fever or flu like symptoms

- Patient gives a history of undergoing a filling procedure for the upper right molar tooth about 3 weeks back. This procedure was done under local anaesthesia.

### Case 8

- A 40 year old male patient who is a farmer by profession comes with a complaint of discharge from his lower lip since 1 month. Patient says he felt small nodules below the skin of the lower lip about a month back and whenever he applies pressure, a thick discharge is expressed and it sticks to the lips and causes him discomfort while speaking.
- Initially it was not painful and off late he feels slight pain on application of pressure over the nodules in the lower lip. He also feels the discharge has changed its colour to yellowish white and has a foul smell. Patient has observed small ulcers on the inner part of the lower lip since 10 days.
- Patient gives a history of albinism from many years.

### Case 9

- A 24 year old male patient who works as a radio engineer in a merchant ship comes with a complaint of swelling of the right side of the neck near the chin area and the right cheek area around the right ear since 2 days.
- The swelling started after 2 days of an episode of fever of 100 deg F which was associated with fatigue and muscle pain. T
- The swelling started initially in the right ear region and then the swelling below the chin region was observed.
- The swelling has slowly increased in size since the past two days and is very painful which increases in intensity around meal times . The patient complains of difficulty in opening the mouth.

### Case 10

- A 37 year old male patient who is a dentist comes with a complaint of swelling irt right and left cheek region around the ear since 8 months.
- The swelling is slow growing, and not associated with any pain, fever or any flu like symptoms.
- However patient says the swelling is associated with feeling of dryness in the mouth which is interfering with speech and eating and this is there since 6 months.
