

4.2.3 Detailed report of activities and list of students benefitted due to exposure to learning resource

Learning is a continuous process and students of our institution will always be in learning mode either through preclinical exercises, attending to patients in clinics and at outreach programs. The learning also happens through seminars, journal clubs and discussion. The institution facilitates all type of learning by providing access to the resources and infrastructure. Training in clinical skills is paramount for the practice of dentistry. These skills are perfected by the student before the actual clinical exposure. Pre-clinical labs help the student in learning the necessary skill sets required for the practice of clinical dentistry. They work on prefabricated models of dental arches and typodont/natural teeth and learn the necessary skills. These exercises are carried out under the strict supervision of the faculty and they grade the student for the quality of the preclinical work. The students record all the exercises in a log book which is submitted during the end of the academic year. Overall assessment of the student performance is based on the timely completion of these exercises and the grades for each exercise.

The students are trained in the art of making radiographs and processing the image both by conventional and digital methods.

They also learn the art of different suturing and local anesthesia techniques as a part of their pre clinical training. Suturing is learnt on a suturing pillow mimicking the mucosa in a patients mouth. Local anesthesia techniques are learnt with the help of the human skull and live demonstration by the faculty.

The students are trained in fabricating complete and partial dentures and crown and bridge preparation on acrylic models and natural teeth set in preclinical prosthetics lab. The students are expected to learn the entire process of denture fabrication (both clinical and lab procedures) and prosthesis fabrication.

The students practice the art of operative dentistry on plaster of paris models, typodont and natural teeth and get trained in the nuances of cavity reparation and also the students are required to have hands on experience of handling and working with the different dental materials used for restoring a tooth. The students learn to fabricate an inlay, onlay, full crown and post and core restorations along with the regular restorations on models as a part of their pre clinical training program. They also practice the skill sets required for endodontic treatment which includes access cavity preparation. biomechanical preparation and obturation of the root canal system.

In the department of pediatric dentistry. the students learn the necessary skill sets in fabrication of oral habit breaking appliances and other orthodontic and orthopedic appliances. This is in addition to the routine cavity preparation and endodontic access cavity preparation and obturation techniques.

The preclinical exercises in the department of orthodontics include fabrication of removal and fixed orthodontic and orthopedic appliances on acrylic and wax models, cephalometric tracing and model analysis. All the preclinical exercises are completed in the first six months of post graduate course and they are allowed to work on real patients once they have mastered the skills.

The undergraduate students complete the preclinical exercises in their 2nd year of the study and they are trained in the laboratory procedures in the 3rd and final year of their course. The students are required to complete the fixed quota of treating the patients. All students learn the chair side as well as laboratory procedures of fabrication of appliances and prosthesis.

The institution is equipped with laboratories to train the students in acquiring these clinical skills. Also these labs help students in fabricating the prosthesis and appliances of the patients which they treat. The institution has acquired state of the art intraoral scanner and Autocad software which exposes the students to realms of digital dentistry. The laboratory services in the institution are an important aspect of student learning activity and it trains the students in various aspects of clinical dentistry.

A handwritten signature in blue ink, consisting of a stylized initial 'P' followed by a horizontal line and a small flourish.
